Homework #2.

Part 1: (Individual Work)

To help you with your project, I have uploaded 4 project examples under the folder, 'Project' on the blackboard: ① Project Example #1 (Battle City) ② Project Example #2 (Bomber Man) ③ Project Example #3 (Figure Drawing Tool) ④ Project Example #4 (Lost).
Each project has 3 documents (Analysis document, Design document, Final report (or user guide)) and its source codes.

Among those 4 project examples, please choose 2 examples.
After choosing 2 project examples, for each chosen example, please read carefully its 3 documents (Analysis document, Design document, Final report (or user guide)), and install the project (by using its source codes) on your computer and try to execute the program based on its user guide.

And then for each document for your chosen project example,
please **1)** suggest what is the strength and weakness of each document. **2)** what kind of improvement can be made to enhance quality of each document.
3) what kind of improvement can be made to enhance quality of your chosen project example based on your experience of the execution of the program after installing its source codes.

Please describe the above **1), 2), 3)** in one page for each project example. You should write them in at least 2 pages for your chosen two project examples and save is as 'part1.docx'. This document should include a photo of your face.

Part 2: (Team Work)

For this part 2, please read first 'Project Description' in Projects folder on blackboard. The part 2 is to write a proposal for your project.
The 'Project Description' documents mentions Phase 0 as follows:
This is a brief paper outlining the need for the new software. The proposal should state who would be the users of the system, what its purpose will be, and who will develop it. The project leader or spokesperson should be identified. The proposal should also identify similar software that is currently available for purchase (or free use), and make the case that this software is inadequate to do the job, necessitating the development of new software."

The level of project should be similar to the level of project examples (Battle City, Bomber Man, Figure Drawing Tool, Lost)

Thus, you should write a brief outline of your project in the part 2 and save it as 'part2.docx'. And please include all of the names of your team members in the 'part2.docx'.
Each group is supposed to submit one proposal. Thus, instead of all members submitting your group proposal, your group leader or spokesperson should submit the proposal on behalf of your group. However, it's the all group members' responsibility to ensure that the proposal of your group is submitted by the deadline.

Zip all those two documents and submit the zip file.

Please upload your submission in the folder "Homework 2" in the Brightspace.

The due date for this homework is by 11:59pm on October 2 (Wednesday).

Important reminder: You must write your own codes and give your own answers. If you copy someone else's codes or answers, it is a serious plagiarism. You will receive zero for this assignment and disciplinary actions will be taken.

Late Policy: If you submit *m* days later than the deadline, your maximum grade will be 100*(1-0.*m*). For example, if *m*=2, your maximum grade is 100*(1-0.2)=100*0.8=80.
