Homework #5.

For this homework, please read first 'Project Description' in Projects folder on blackboard. This homework is to write the 'Final Report' for your project.
The 'Project Description' document mentions Phase 3 as follows:

Final Report is a document that discusses how the implementation went and whether or not any major changes to the design had to be made due to complications during the implementation. This report is to include some Exposed Documentation of the software system (could be an Appendix), corresponding to a User's Guide, and should provide everything that is needed to install and use the software properly. The document should also state the status of the implementation (i.e. any parts that are not implemented or are incomplete).
Again there is no single way to organize such a report, a sample follows:

1. Introduction: State where you stand at the moment with the implementation
2. Design changes: Describe any changes in the design and present high and/or level level design diagrams if needed
3. Lessons learnt: Tell us about your experience
4. User's Guide
   4.1 System requirements & installation
   4.2 How to use

Thus, 1) you should write the Final Report and save it as 'FinalReport.docx'. And please include all of the names of your team members in the 'FinalReport.docx'.
As one of the final reports, please create a YouTube video that demonstrates the installing process of and the execution of your project. Please include the YouTube link on the final report.
2) You should also submit the source codes and executable program too.

In addition, please describe what each member did for this Final Report and the implementation of the project. Each member should describe their own specific contribution to this Design document in one page.
Then please compile all of them.

Please upload your submission in the folder "Homework 5" in the blackboard.
The due date for this homework is by 11:59pm on December 15 (Sunday).

Important reminder: You must write your own codes and give your own answers. If you copy someone else's codes or answers, it is a serious plagiarism. You will receive zero for this assignment and disciplinary actions will be taken.

Late Policy: If you submit *m* days later than the deadline, your maximum grade will be 100*(1-0.*m*). For example, if *m*=2, your maximum grade is 100*(1-0.2)=100*0.8=80.
